

SILICA STANDARD TESTING

Are you aware of OSHA's silica standard?

Let us help keep you compliant.

In 2018, OSHA issued a final silica standard to reduce diseases related to respirable crystalline silica exposure. Over 600,000 workplaces come under the scope of compliance, and employers must now provide medical tests to monitor highly exposed workers.

These silica tests include:

- Silica questionnaire
- Physical exam
- Chest X-ray with "B" reader
- TB Skin test
- Respirator questionnaire
- Respirator fit test
- Pulmonary function test
